

If access is required onto the back of the lorry to be loaded or unloaded, steps must be taken to prevent them from falling such as a running line to which a person wearing a safety harness can be attached

Where possible eliminate the need to work at height to load / unload lorries by using fork lifts or MEWP's operated by competent persons or if possible have the loads pre-slung

Air bags placed around the lorry trailer will prevent persons from falling /and will provide a safe place of work . Safe access as example shown should also be available

Here are a few more examples of the types of edge protection when installed correctly can prevent people falling

The safe loading /unloading of lorries / vehicles brings with the possible fall from height therefore suitable steps must be taken to prevent this. It is essential that people undertaking this work can access the workplace in a safe manner and apply a safe system of work. Obviously if loading or unloading can be without the need to access the back of a lorry all the better. Here are a few examples of how protection to prevent falling from lorries can be applied.
